Your portfolio website/link (if you have).

Kevin

Project Description
SalingJaga is a collaboation initiative to create an intuitive panic button and helper for domestic and sexual assault victims. I was tasked to design the main homepage of the service. Through the main homepage, users can obtain information regarding the service, the people behind the service, and find available services via geolocation mapping. In this project, I worked as a UI/UX Designer alongside other designers, software engineers, and managers tasked to research and design the lifesaver app.

Imperium (2020) Album Cover

2020

Graphic Design
https://links.vnctkevin.com/Imperium

Kevin

Project Description
Imperium (2020) is the title of a collaborative mini-album by duo Deo & Gregory Go. The album is currently available to stream at Youtube. In this project I was involved in providing the artwork for the album cover.

The Moodboard

The Fall of Rebel Angel by Pieter Bruegel (1562)

The Implementation

After searching a lot of Rennaisance painting that fits the moodboard, I stumbled upon "The Fall of The Rebel Angel" by Pieter Bruegel (1562). I then decided to fit this painting into the cover for the dynamics and mood of the painting which I thought fit very well to the album's heavy characteristics.

In order to also represent the electronic music influence, I decided to use a rainbow line to add colors and composition of the cover as well as adding the album title and the musicians' names. For the texts, I used Graphique Pro Next font.

The Cover

After gathering the moodboard, I decided that I also have to listen to the music itself as well. Fortunately, both musicians agreed to gave me a look (or should I say... listen?) to the demo album. After hearing the 5-song demo, I get a better clearance of what the album cover should look like.

Coconut Java Coffee Branding

2020

Graphic Designer

https://ristek.link/CoconutJava

Kevin

Project Description

Coconut Java Coffee is an independent coffee brewery and business based in Jakarta which aimed at providing high quality coffee beverage to everyone. I was involved in this project as Lead Designer who create, build, and communicate the branding and design system of Coconut Java Coffee. My involvement in this project started in March 2020 and ended in July 2020.

SxC International Summit Merchandise Store Website

2021

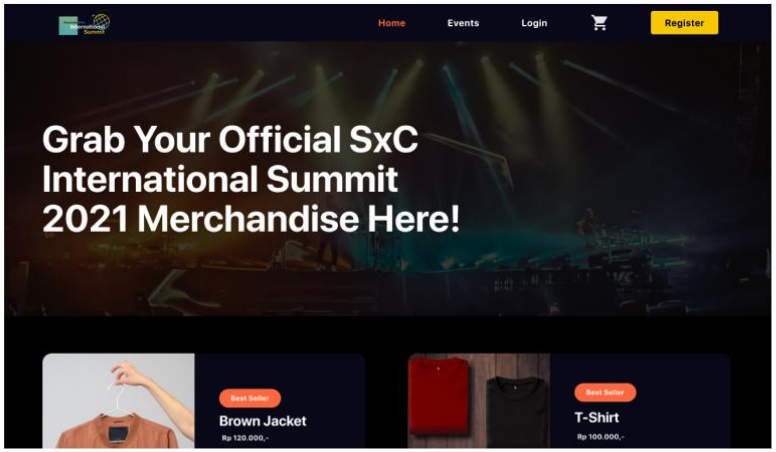
UI/UX Designer

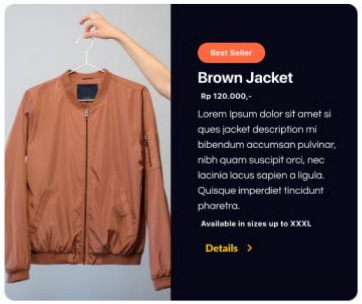
https://compfest.link/MerchWebsite

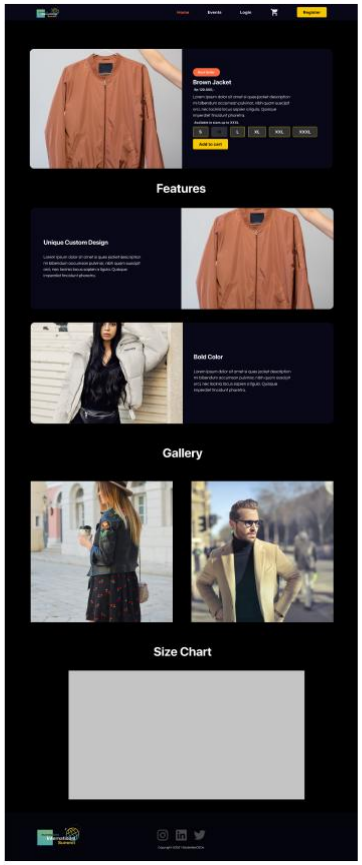
Kevin

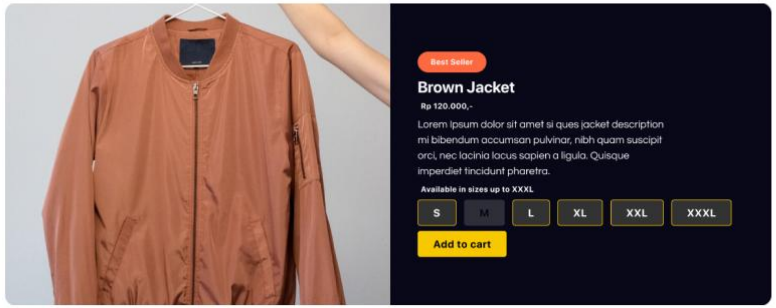
Project Description

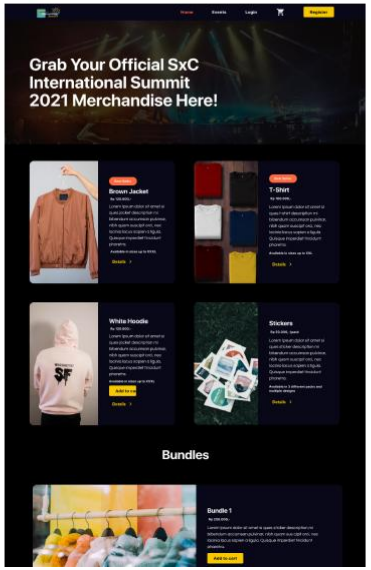
StudentXCEOs International Summit (also known as SxC InterSummit) is an international student event where you can attend seminars, workshop, and competition initiated by the StudentXCEOs Jakarta Chapter. I was tasked to design Merchandise Store, an official online store found in SxC InterSummit's main homepage. Through Merchandise, users can obtain information regarding the official merchandise of the event that can be used in the playground through easy and intuitive online shop experience. In this project, I worked as a UI/UX Designer alongside other designers, software engineers, and managers tasked to research and design the merchandise store.











QlueWork App (Redesign) – A Technical Test by Qlue Smart City

.

2022

ZAKU – Developing a Low-Code Financial Management App

2024

Low-Code Development Engineer

https://go.vnctkevin.com/ZAKU

Kevin

Project Description

As a participant of Mandiri My Digital Academy Batch 2, I collaborated with a team of six bootcamp participants to develop a low-code financial management application. Utilizing the OutSystems platform, we prioritized user-centric design by conducting comprehensive user research to inform feature selection. Through a systematic process of problem identification, product ideation, and validation, we identified the Minimum Viable Product (MVP) to meet the diverse needs of our target audience. Over the course of a month, we integrated user feedback and iterated the application's features, ensuring its alignment with user preferences and requirements. This dedication to user-centric development ultimately resulted in the successful compilation and deployment of the application as APKs, poised to revolutionize financial management for our users.

Garuda Amerta Consulting – Redesign and Redevelopment of a Consulting Services Website

2025

Full Stack Engineer

Kevin

Project Description

Our partnership with Garuda Amerta Consulting (garudaamerta.com) began with an extensive analysis of their operations and the experiences of Garuda Amerta Consultants and Experts. Through collaborative meeting sessions with consultants and internal staff, we identified key needs to enhance their digital presence. For the start, they have already built and maintained the website using WordPress CMS. But without in-house technical expertise, they found it challenging to keep the website updated and aligned with their evolving services. Our team adopted a user-centered design approach in order to rejuvenate the website design and redevelop its pages from scratch. We redeveloped the company profile using WordPress, utilizing its easy-to-use content management system, familiarity with the platform, as well as enabling efficient content updates and easy management of consulting resources by Consultants without a software development background..
